

New Delimiting Knives Manufactured

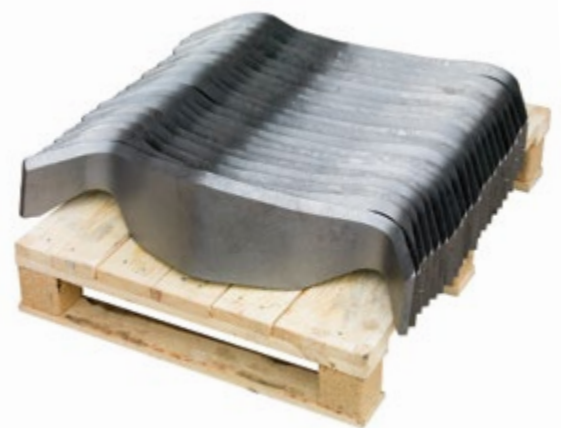

Clark Delimiting Knives

Let us work with you to improve the delimiting performance of your machine. Worn and poor quality knives consume machine energy and fuel, produce high stress forces on the harvester head and offer poor delimiting. Clark Harvester Delimiting Knives are designed for UK conditions. Manufactured from special hardened and tempered Borarc alloy steel, ground and polished for best delimiting results.

- ✓ Low friction
- ✓ High delimiting quality
- ✓ Less bark removal
- ✓ Reduced delimiting force requirements
- ✓ Low maintenance and resharpening
- ✓ Special heat treated alloy steel for strength and hardness

Delimiting Knife Blades

We can supply weld on replacement blades for many types of harvester. Borarc steel is easily weldable with standard welding procedures making the task of blade replacement very simple.
